Planning Meets Execution: Redefining the perfect plan through anticipation

George Fowler

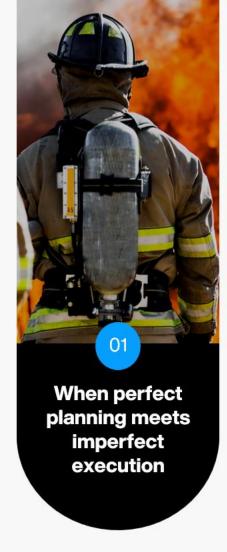

CTO & SVP of Supply Chain Planning Spinnaker SCA

Brett Lindner

Director of Product Management **Manhattan**

AGENDA

What we'll discuss today

George Fowler

Chief Technology Officer & SVP of Supply Chain Planning

At Spinnaker SCA, George and his team have successfully delivered hundreds of supply chain planning system implementations for Fortune 100 manufacturers, distributors, and public sector organizations. His work has generated billions of dollars in realized supply chain value—driven by his unique ability to bridge deep technical knowledge with board-level strategic insight.

Brett Lindner

Director of Product Management

A seasoned product leader with years of retail experience, Brett and his team bring the product vision to life at Manhattan. His strong knowledge of supply chain and merchandising systems, combined with his expertise in demand forecasting and replenishment solutions, enables the company to push what's possible and deliver premium supply chain technology for leading brands.

Purpose-built for digital business transformations

DIGITAL BUSINESS TRANSFORMATION HUB FOR PUBLICIS GROUPE

THE POWER OF ONE

20,000+

Passionate people

50+

Global, connected offices

30+

Years of digital pioneering & customer innovation

EXTENSIVE EXPERTISE ACROSS INDUSTRIES

micron.

NORDSTROM

ALLKEY INDUSTRIES SERVED

Automotive, Consumer Products, Retail, Health & Life Sciences, High-Tech and Semiconductor, Energy & Commodities, Media & Telecom, Logistics Service Providers

RECOGNIZED SCM LEADER

Top 25 Technology Consultant and Leaders, The Consulting Report (2025)

Data Modernization Services Market Leader, Data Modernization Services Horizons Report (2023)

Best Consulting Firms Vault North America "Consulting 50" (2023)

Management Consulting World's Best Management Consulting Firms (2023)

Digital Transformation Services Leader (2022)

20+ Supply Chain Pros To Know Winners, Supply & Demand Chain **Executive Magazine**

Top 50 Consulting Firms Ranked #12 (2023)

K

400+ dedicated supply chain professionals

Passionate supply chain specialists, subject matter experts, and practitioners located across North America, LATAM, EMEA & APAC

Strategic supply chain management expertise

Strategic assessments, roadmaps, network design, organizational change management and vendor selection

End-to-end technology implementations

Deep supply chain application knowledge with a proven track record of successful full cycle implementation projects

Supply chain technology pedigree

- Leader in Tier-1 full-cycle technology implementations and solution innovation
- Nearly 25 years of supply chain transformation experience including process design, solution implementation, and managed services
- Proven methodology focused on outcome-based delivery

Supply chain is in our DNA

Supply Chain Strategy & Transformation

We help you design, execute, and scale a supply chain strategy that works today and wins tomorrow.

Warehouse Operations & Automation

We help you execute seamlessly while balancing flexibility, feasibility, and cost efficiencies inside the walls of your distribution network.

Connected Planning & Fulfillment

We help you balance demand and supply across your network to ensure products are available when and where they are needed.

Transportation Optimization & Visibility

We help you build a transportation network that delivers for you and your customers from the first mile to the last.

Customer Order Promising & Orchestration

We help you leverage customer intelligence to optimize order flows and systems for fast and personalized customer experiences.

Supply Chain AI & Data Engineering

We help you harness the power of Al, machine learning and data science to make smarter, faster decisions.

Spinnaker SCA & Publicis Sapient:

A complete digital business transformation partner

Connected supply chains

Asmarter, more complete view of supply and demand leveraging data from Enterprise, Ecosystem, and External data streams

End-to-end business transformations

Digital and tech-enabled business transformations anchored in process re-alignment and change management —so it actually sticks

Accelerated innovation

Scalable AI platform that enhances and accelerates the modernization of legacy systems using GenAI as a force multiplier

Supply chain systems have huge operational blind spots

Out of control towers

Short-term memory loss

Failure to plan

Exceptions are the rule

The proliferation of data across disconnected supply chain data sources for Enterprise, Ecosystem, and External make timely well-informed data decisions and insights difficult to manage.

Current solutions often rely on the concatenation of various systems with little regard for the utility, context, and time sensitive nature of that data. Moreover, these sources often fail to derive value from the meaningful combination of planning and execution data.

Even today's most sophisticated planning solutions operate like large memory-less functions with no connection to the results that they've produced in the past.

Recommendations are produced with little regard to current trends, past performance, business exceptions, or gating issues. This relegates users to redundant fire fighting.

Planning parameters are often stale and fail to represent the actual state of the business.

Stale, inaccurate static variables associated with plan adherence, yield, lead time variability, and actual production rates often skew expected output that make the most optimized plans infeasible. This exacerbates the endless cycle of exception management.

Exception resolution often lacks visibility to meaningful inputs and insights from the most relevant and impacted systems.

Lack of meaningful data persistence can often make identification of the root cause and cost implications of potential decisions a constant exercise in futility. Further it limits the ability to perform effect Simulation, Scenario, and Cost-to-Serve Analysis.

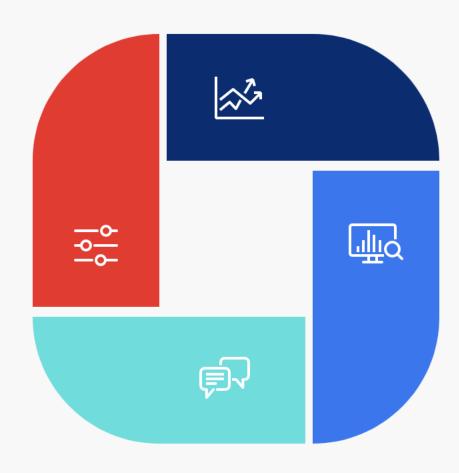

The real problem: Siloed planning approach

04. Adjust

Adjust the next plan based on previous misses and replan leveraging initial assumptions

03. React

Fix issues created by misses between plan and actual

01. Plan

Aplan generated by a typical Advanced Planning Solution

02. Evaluate

A comparison of what actually happened versus the plan

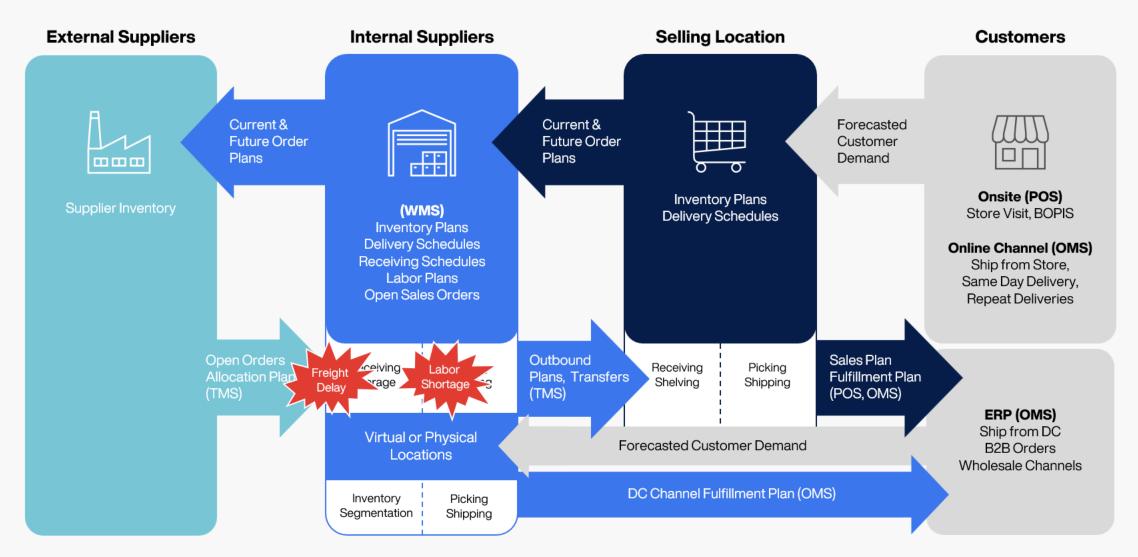

>> The perfect planning fallacy

"If only my forecast was better, I'd get better results" is an oversimplification of the problem.

Traditional operating paradigm

How it impacts your business

01

Connected Planning & Performance

Organizational friction and finger pointing negatively impacts performance

02

Warehouse and Labor Operations

Lack of direction on what to prioritize, plus no visibility to the downstream impacts of their decisions

03

Opportunity Cost of Misses

You're left with excess inventory and may be required to discount it because your vendor-funded sales window has closed

What's required to change the game

End-to-end bi-directional visibility across planning, execution and beyond

Plan explainability and root cause analysis

Operational feedback to fine-tune planning parameter(s)

Data access and availability, plus strategic persistence and reliability

Trend recognition of E&O to evaluate the relative impact probability and cost-to-serve

Interconnected responses where changes cascade to all effected business segments

Real-time access to execution metrics including OTP, yield, resource rates, and disruption.

Measured responses
evaluate reaction over
various time horizons with the
appropriate prioritization and
probability

Localized Insights to leverage and train federated Al models to avoid sharing your competitive advantage

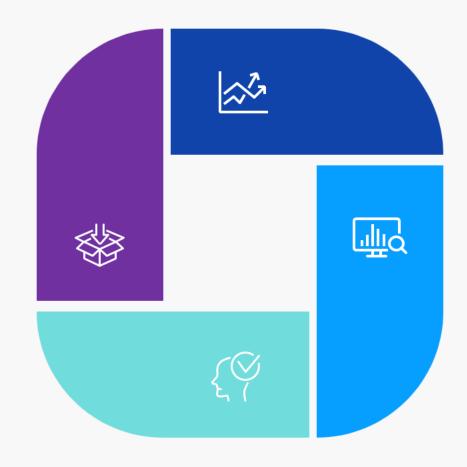

A new way forward: Connected planning & execution

04. Execute

Deliberate execution aligned with business strategies, cost objectives, and effectively collaborate

03. Anticipate

Resolution of potential issues while simultaneously acting to mitigate future risk and increase opportunity

01. Plan

Aplan generated by a typical Advanced Planning Solution

02. Evaluate

Understand the total impact across all relevant variables from both planning and execution

Everything, Everywhere, All at Once:

The Power of Anticipatory Planning

Demand Forecasting

Predicting the quantity of products customers are going to purchase in the future.

Order Management Create a seamless customer experience

across in-store and online channels, plus enhance inventory visibility and improve customer satisfaction

Allocations

Push owned inventory throughout the network to minimize cost of getting the product to the consumer by having the product at the right place at the right time

Warehouse Management

Management of actives in the warehouse, from inbound receipts to outbound deliveries. Manages the flow of goods through the DC

Replenishment

Purchasing of goods into warehouses or stores. Buying the inventory from both internal and external suppliers.

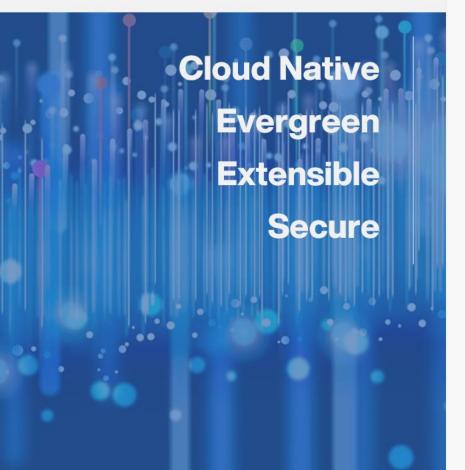

Transportation

Streamline logistics and transportation process, manage shipments and reduce landed cost

Omnichannel Commerce
